First published in 1987. In Unfolding Meaning, the author, one of the most provocative and original thinkers of our time, argues that there are other ways of thinking to bring about a different, more harmonious reality. Our fragmented, mechanistic notion of order derives from the modern conception that our earth is only part, not - as it was with the Greeks - the centre, of the immense universe of material bodies. The implications of this idea permeate modern science and technology today and also our general attitude to life.
